

THE GAME

The Crypto Show is a game show ecosystem that works in a decentralized manner using Smart-Contracts. The Binance Smart Chain allows us to run a multiplayer live trivia game, where users can connect with their wallet (for example Metamask) and participate in the game rounds. Every round will present you with a question, using the feature of open live game not only you, but unlimited number of users can participate at the same time.

Every user that will choose to participate will first need to connect with their wallet. Once a wallet is connected to the Binance Smart Chain the game will allow you to choose an answer and submit it to the Blockchain. Once an answer is submitted it will open a dialog where you will need to approve the transaction. You will have **18 Seconds** to do all that and you can use the built-in timer of the game. Every round participation will cost a certain amount of BNB or BUSD (User may choose either one) that will be collected and added to the Total Jackpot. If you answer a question correctly you will win BNB tokens.

THE GAME EXAMPLES

The game presents everyone with **One Question and Four Answers** at the same time, **Three of which are incorrect.**

Every user that submits an answer will pay a certain amount of BNB that will be added to the Total Jackpot, usually 5\$ worth for each round. You will be able to see the total amount of BNB and BUSD value in the round jackpot. If you answer correctly you win the jackpot, if more than 1 user wins, the jackpot is divided equally between winners.

Check the following scenario

You enter the game and you see the Total Jackpot is **125BUSD**, you see that there are still 19 seconds left for the round, you choose your answer, submit and boom! You're in.

130\$ in Jackpot (125\$ + Your 5\$) that means **26 users** participated in that round including you (130 / 5 = 26) Let's assume **3** users answered correctly, those users will share the Total jackpot - Minus **9%**, that will ALWAYS be used for **The Profit Pool** and **Burn**.

THE PROFIT POOL

The Profit Pool will be made of SHOW tokens. In every round of the game **91%** (Reducing minor transaction fees) of the Total Jackpot (in BNB) will be shared among the winners who answered the question correctly.

The Smart-Contract of the game will collect **9%** of the Total Jackpot (in BNB) and will use it to buy SHOW tokens in Decentralized Exchanges. Constantly buying SHOW tokens in Decentralized Exchanges will keep increasing the token usage and value.

The Smart-Contract will then send **2/3 (Two Thirds)** of those SHOW tokens to the Profit Pool, the **1/3** left will be **burned** forever out of circulation by that making the SHOW token more scarce.

So from **9%** that was used to purchase SHOW tokens **67%** from it will go towards **The Profit Pool** for users who Stake their tokens in The Staking Pool.

THE PROFIT POOL EXAMPLES

Let's use the example from above:
130\$ - 9% = 118.3\$ to be shared amongst 3 winners who answered correctly, they will each get **39.4\$** in BNB.

Now 130\$ - 118.3\$ = 11.7\$ will be used to buy SHOW tokens.

Let's assume each SHOW token costs 0.05\$, 11.7\$ / 0.05\$ = **234 SHOW tokens** will be purchased.

Two Thirds (2/3) **156 SHOW** will go to the **Profit Pool**.

One Third (1/3) **78 SHOW** tokens will be **Burned** reducing the total amount of SHOW tokens from 99,000,000 to **98,999,922**.

This will happen EVERY ROUND.

The Profit Pool will be the source of rewards for users who STAKE the SHOW token.

Users will be able to STAKE their SHOW tokens in The Staking Pool in order to gain more SHOW tokens.

THE STAKING POOL

The Staking Pool will be made from SHOW tokens and SHOW-LP tokens that holders decide to Stake.

The Staking mechanism will hold your **shared** amount of SHOW or SHOW-LP tokens inside the Smart-Contract and will decide your holdings percentage (%) from the Total Tokens Staked by all users.

Once The Smart-Contract knows your Staked **% AND Duration in Blocks** it will calculate your entitled **share** of The Profit Pool.

By staking tokens in The Staking Pool, token holders will be able to earn more SHOW tokens from EVERY round in EVERY game in our ecosystem.

Another benefit of staking SHOW tokens is that it will give holders **Governance** abilities, holders will act as Board Of Directors in our ecosystem and will be able to vote on different proposals to the games.

The more % of your **share** the more weight your vote will have.

THE STAKING POOL FEATURES

The Staking Pool's **main role** is to determine the % of the tokens that every user is staking in relation to the total tokens staked in the staking pool.

That **% with Time Staked** will be used later on to reward holders from **The Profit Pool**.

In the first **365 days** of running our ecosystem the Crypto Show team will contribute **42,000,000** SHOW tokens to **The Profit Pool** in a time frame of **1 year** in addition to the tokens added every round of the game.

Early holders who stake will enjoy this benefit.

Once the **42m** tokens has been contributed staking rewards will continue to **share 6%** to users as game rounds progresses. There is no time limit or requirement for staking, users can Harvest rewards every Block.

Another Amazing Features for Staking is that users can stake either SHOW tokens OR stake SHOW-LP tokens bought from DEX, that way users may earn **twice 1st** for providing liquidity to decentralized exchanges and receiving LP token. **2nd** for using that SHOW-LP token in our Staking Pool to enjoy constant game rewards.

THE SHOW TOKEN

The SHOW token is a BEP-20 Token and can be used in The Binance Smart Chain (BSC)

SHOW token Initial and Maximum amount is **99,000,000 (99m)** tokens.

There will **NEVER** be more than 99,000,000 tokens.

SHOW token total amount will gradually shrink as more rounds of our games are played and as more users on-board the ecosystem to enjoy our mind challenging games.

As time goes by SHOW tokens will become very scarce and will hold many benefits.

42m tokens for the Profit Pool will be locked and released as needed during 1 year by the Smart Contract.

THE USE-CASE OF SHOW TOKEN

The Crypto Show ecosystem is bound to grow by adding more games to our game show ecosystem.

SHOW token will be used in various ways:

- In-Game Features
- Staking
- Farming
- Governance
- Much More..

Unique Features For SHOW Token

SHOW tokens can be used in-game in order to give "Extra Powers" as Helpers to users. The main Helper in our live Trivia game will cost a certain amount of SHOW tokens, if a user is not sure about 1 out of the 4 answers and chooses to activate the helper **2 out of 3 Incorrect Answers** will be **removed** from the board only to that user, by that increasing the chance for that user to answer correctly.

More features will be added making SHOW token utility useable and necessary. The Crypto Show's future will bring so many new features including: **NFT's**, **Lottery**, and more games. All using **SHOW** as the main TOKEN.
